# SQUID SQUAD: Using a collaborative framework to identify oceanographic indicators of *Illex illecebrosus*

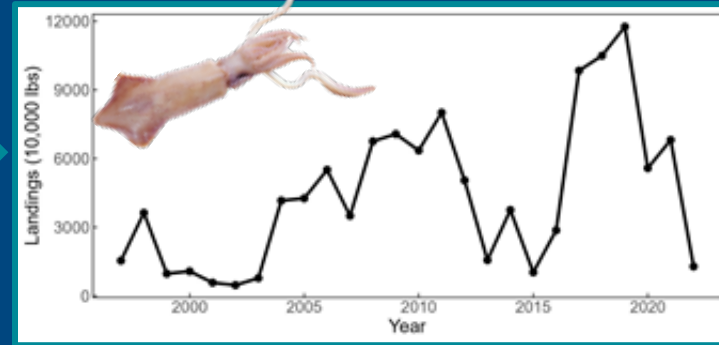

Kimberly Hyde, Anna Mercer,  
Sarah Salois

Northeast Fisheries Science Center | NOAA Fisheries

SMAST | University of Massachusetts Dartmouth

# How it started

Are there oceanographic drivers that can help explain the variability in *Illex* catch?

**NOAA**  
FISHERIES

# Background

**2019 *Illex* Summit:** Identified research needs, initiated research partnerships

**Ecology:** Many aspects of *Illex* habitat and population ecology are uncertain

**Oceanography:** Changes in the Northwest Atlantic ocean dynamics

**Data Availability:** There is limited survey data and sampling of their Slope Sea habitat

Summit report: Northwest scientific squid (*Illex illecebrosus*) population ecology: 8  
the Biology Symposium, November 20-26, 2019  
at Stanford, Rhode Island

# The Experts

The Squid Squad is a highly interdisciplinary group with a common interest - **to improve squid science!**

**Government:** Kimberly Hyde, Anna Mercer, Sarah Salois, Sarah Gaichas, Thomas Swiader, Andrew Jones, Sarah Turner, Benjamin Galuardi, Daniel Hocking, Paula Fratantoni, Brooke Lowman, Carly Bari

**Academia:** Adrienne Silver, Avijit Gangopadhyay, Glen Gawarkiewicz, Steve Lorenz

**Industry:** John Manderson, Katie Almeida, Bill Bright, Greg DiDomenico, Jeff Kaelin, Meghan Lapp, Jimmy Ruhle, Steve Axelsson, Leif Axelsson

**Management:** Paul Rago

# Why This Works

“Collaboration with like minded team members that are specialist in different fields...”

“Sharing knowledge, data and ideas”

“Many different voices & shared enthusiasm”

“Mutual respect & shared curiosity”

“An authentically productive and respectful engagement...”

“Bringing the right people together to explore ideas...”

“Open communication”

“Collaboration, inclusiveness, and an open dialogue”

“People asking real questions, conducting real collaboration, and a desire to learn...”

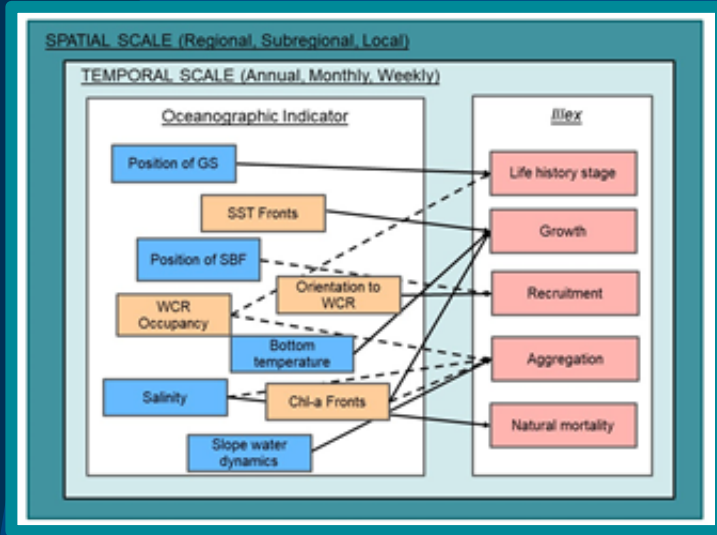

# Why This Works

transparent  
insightful like-minded collaborative-science  
respect creative collaborative-assessment sharing  
**collaborative**  
cooperative compassion innovative fascinating productive  
supportive industry-science data comprehensive  
educational enthusiasm progressive  
investigative real-time curiosity learning  
rational exploratory thoughtful collaboration  
inclusive courageous  
synergistic understanding

# The Process

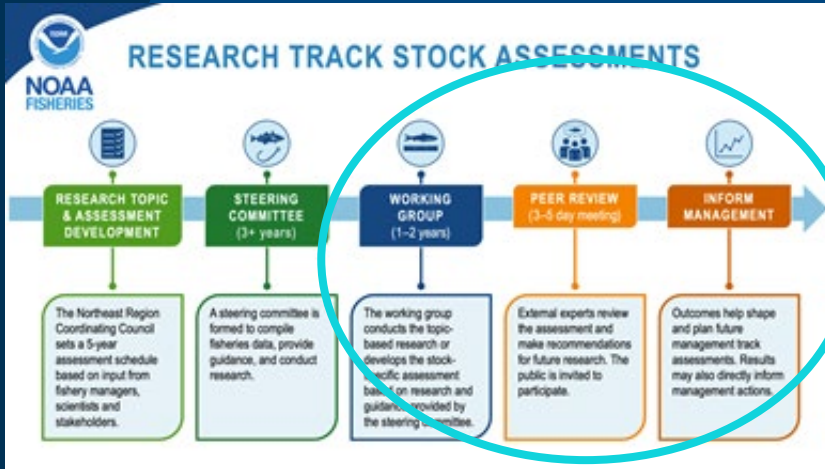

Model

Size of *Illex* catch is a function of a suite of temporal and spatial variables (e.g. date, bottom temperature, warm core ring orientation, chlorophyll fronts)

# The Products

**FISHERIES OCEANOGRAPHY**

Shelf break exchange processes influence the availability of the Northern Shortfin Squid, *Illex illecebrosus*, in the Northwest Atlantic

“The COLLABORATION of different backgrounds coming together to try to piece together the puzzle of *Illex* production”

**NOAA  
FISHERIES**

# What's Next?

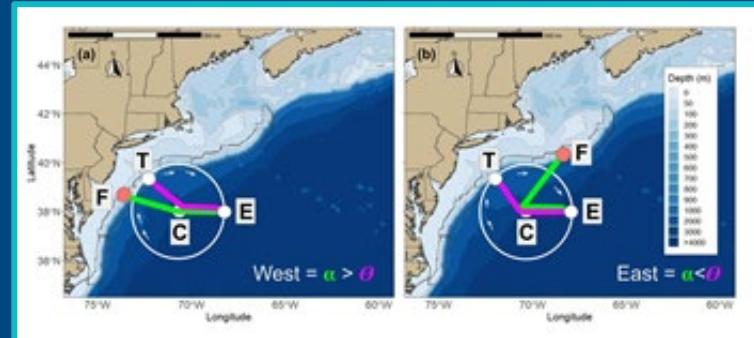

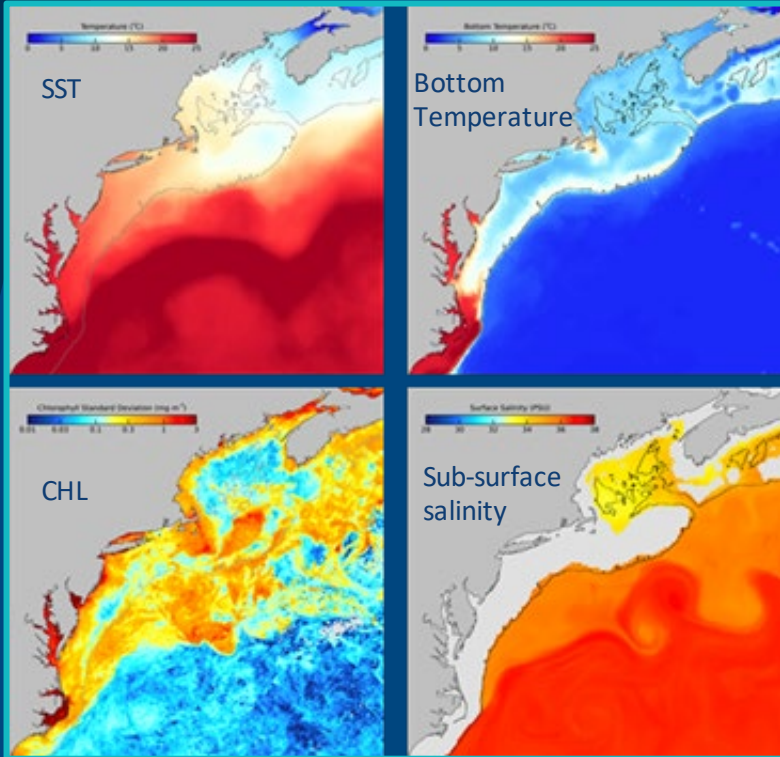

**Data Collection:** Collaborate with fishing vessels and academic researchers to simultaneously collect biological and physical data to test hypotheses.

**Prioritize Research Recommendations:** Continue to investigate how the changing environment affects *Illex* availability and help refine best management practices.

**Loligo:** Compare and contrast the *Illex* and *Loligo* fisheries and consider more socioeconomic factors.

# Oceanography

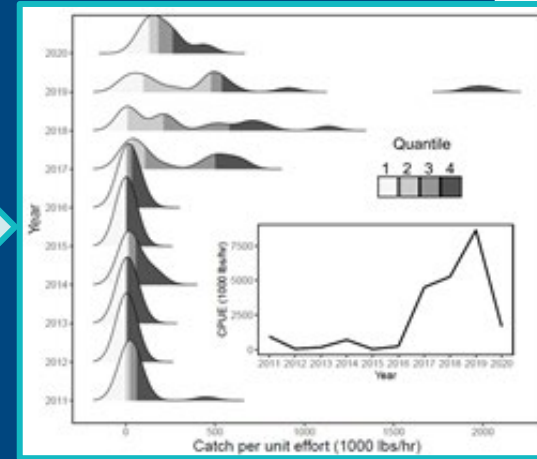

# Research Results

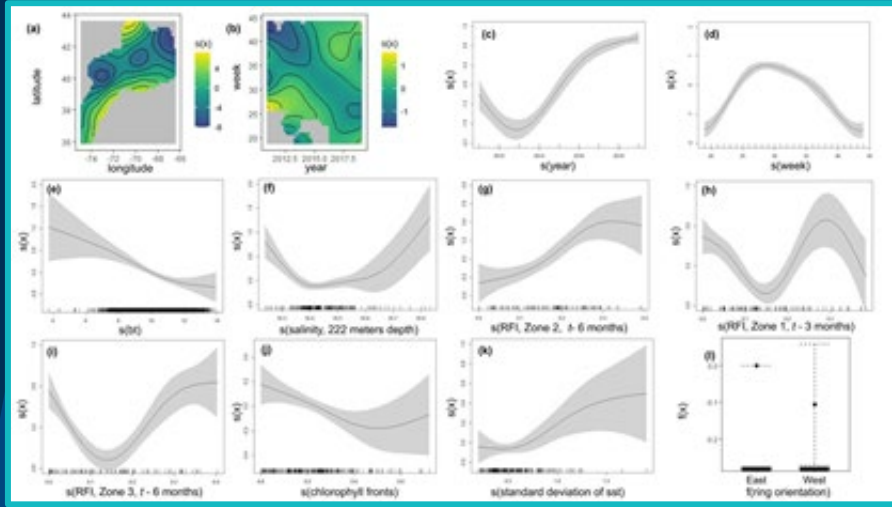

By combining knowledge about the dynamics of the physical oceanography in the region with the current ecological and observational understanding of this species, we were able to construct a model that represents a reasonable hypothesis about how the system works.

- Bottom temperatures
- Timing, size and location of WCRs
- Subsurface salinity
- Chlorophyll fronts
- Variability of SST

Explained over 50% of the variation in CPUE for the Illex fishery over the past 10 years

# Research Results

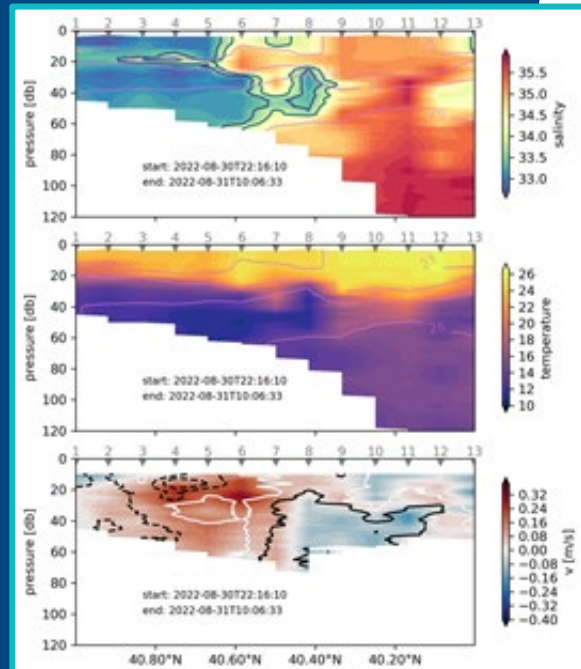

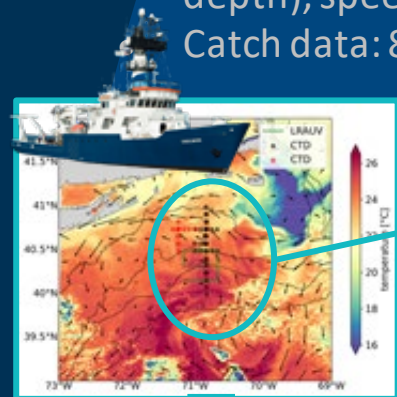

## Specifically:

- (i) Cooler bottom temperatures
- (ii) Higher Ring Footprint Indices (RFI) in the winter and early spring months (ahead of the summer fishery)
- (iii) Upwelling processes (e.g.: frontal dynamics and interactions between WCRs and subsurface features) are associated with greater CPUE.

# Current work

## F/V Dyrsten & R/V Endeavor: Fishing and research vessel collaboration

- Explore relationship between salinity maximum intrusion and *Illex* squid
- Oceanographic data: acoustics, length, weight, CTD profiles (temperature, salinity, depth), speed, direction of currents
- Catch data: 8 tows, ~ 15 species

# Current work

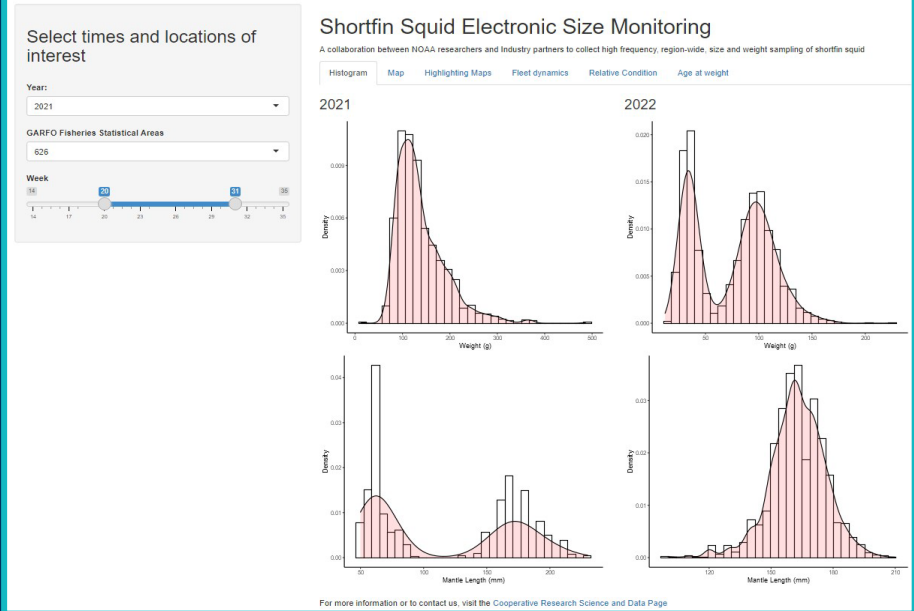

## ILXSM: Paired length and weight data analysis

- Partnered with the 6 largest shortfin squid processors ranging from New Bedford, MA to Hampton, VA
- Near real-time (within 72 hours) length and body weights of individual *Illex*

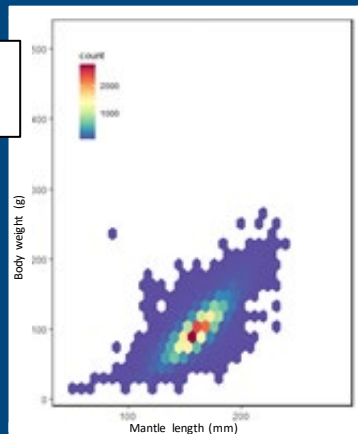

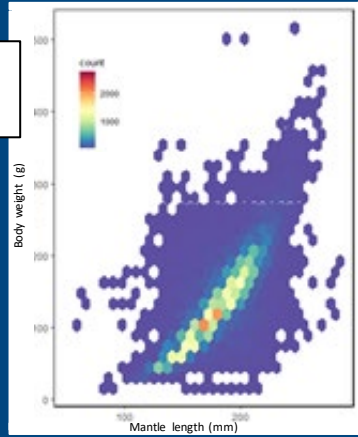

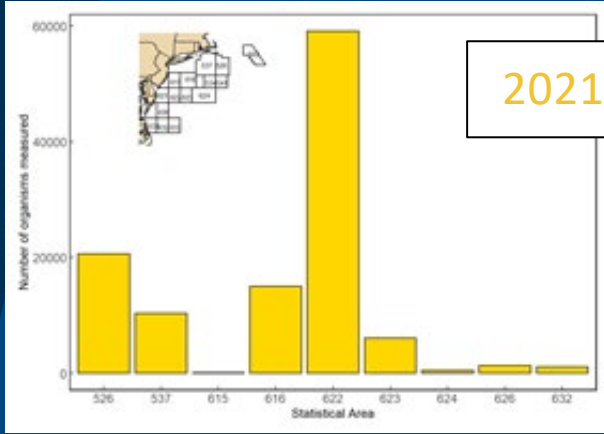

## Visualizing ILXSM data

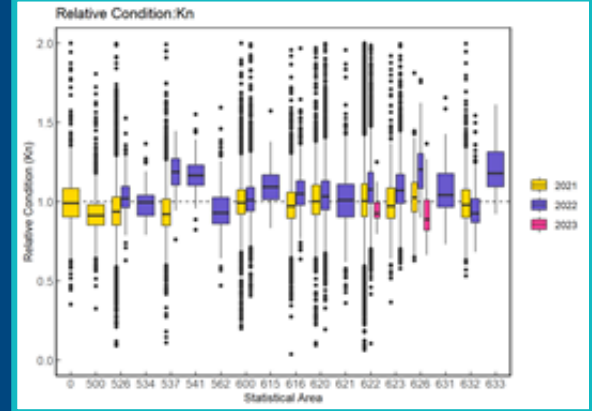

# Current work

# Potential analyses

**ILXSM:** Weight frequency analysis and evidence of cohorts, relative condition

**Feedback:** What analyses are most useful to support management goals?

# MAFMC Priorities

**Collect:** Demographic Information

**Analyze:** Availability changes due to oceanography

**Examine:** Oceanographic and abundance correlates

**Investigate:** Feasibility of dynamic forecasting

# Pending Research

**Oceanographic Drivers:** Field sampling and ecological modeling to better understand the mechanisms driving changes in *Illex* availability (pending funding).

**Frontal metrics:** Develop metrics for the Shelf Slope Front and cross-shelf exchange (pending funding).

**Population Dynamics:** Enhanced biological sampling for *Illex* and *Loligo*, with focus on reproductive dynamics (pending funding).
